

D6.4 Prototype of a Decision Support System for Smart Borders - Summary

With the aim of maximizing the usability and impact of the Performance Model created in WP4, the project has developed a Decision Support System (DSS) that enables border guards practitioners to assess the potential impact of implementing new solutions, leveraging from the research performed in BODEGA.

This deliverable aims at ensuring the proper use for the tool by providing a clear user's manual. It contains the essential information for the user to make full use of the DSS, including all its components and functionalities. This report guides the user through all the steps necessary to carry out an assessment and comparison of alternatives. The default criteria assessed are main BODEGA drivers as defined in WP2: Speed, Security and Fairness. However, the user may cast additional criteria at will.
